

## Hull and Patio Wax *by Lustersheen*

Lustersheen *Hull and Patio Wax*, unlike our wood and antique care waxes, is a high solids wax specially formulated to be used on the exterior.

Hull and Patio Wax is ideal as the seasonal pick me up to many patio furniture pieces. Lustersheen's *Hull and Patio Wax* works well to provide a lustrous shine to weathered and bleached out patio table tops. As a high performance exterior sealing wax, Hull and Patio Wax is excellent for the preventive maintenance on many patio furniture pieces and can be used easily on a regular as needed basis.

Hull and Patio Wax is exceptional for patio table tops and the perfect polish to shine the table tops used on the porch for outdoor events, backyard picnics, barbecues and family outings.

*Hull and Patio Wax* is a high volume solids wax specifically engineered to seal and protect all above water surfaces from UV and salt water degradation. This product will restore shine to a vessels topsides and all areas above the waterline.

As a *Hull Wax* and polish designed for a boats topside, it helps seal the microscopic pores in the boats gel-coat caused by UV damage. These same properties make this the ideal polish for porch and deck woodwork and furniture, and particularly suitable for the enhancing and protecting of patio table tops.

*Hull and Patio Wax* makes the boat's various above water substrates (*and thus your patio table tops*) much easier to clean and resistant to staining.

*Hull Wax* should never be used below the waterline as it will stop the adhesion of any paint system and if applied over anti fouling will effectively block the chemical interface between the paint and the seawater.
